

Hands-on Lab: Getting Started with GitHub

Effort: 20 min

**IBM Developer
SKILLS NETWORK**

In this lab, you will get started with GitHub by creating a GitHub account and project and adding a file to it using its Web interface.

Objectives

After completing this lab, you will be able to:

0. Describe GitHub
1. Create a GitHub account
2. Add a Project / Repo
3. Edit / Create a file
4. Upload a file & Commit

GitHub Overview

First, let us introduce to GitHub. GitHub in simple words is a collection of folders and files. It is a Git repository hosting service, but it adds many of its own features. While Git is a command-line tool and a server needs to be hosted and maintained via command line as well, GitHub provides this Git server for you and a Web-based graphical interface. It also provides access control and several collaboration features, such as wikis and basic task management tools for every project. GitHub provides cloud storage for source code, supports all popular programming languages, and streamlines the iteration process. GitHub includes a free plan for individual developers and for hosting open source projects.

Exercise 1: Creating a GitHub Account

Please follow the steps given below to create an account in GitHub:

Step 1: Create an account: <https://github.com/join>

NOTE: If you already have a GitHub account, you can skip this step and simply login to your account.

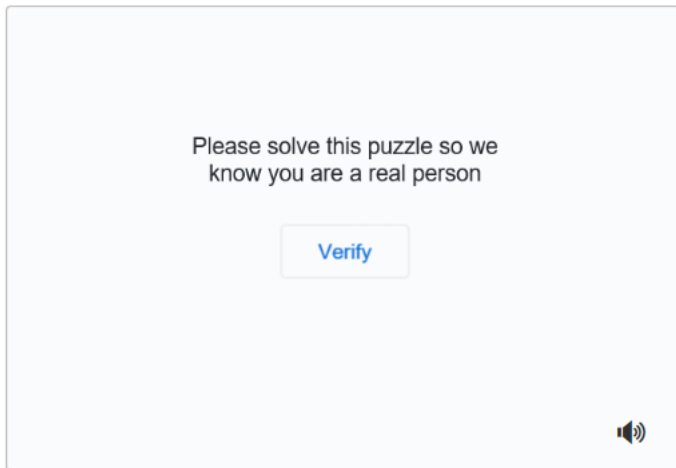

Step 2: Provide the necessary details to create an account as shown below:

A screenshot of the GitHub 'Create your account' page. At the top, it says 'Join GitHub' in small text. The main heading is 'Create your account'. Below this are three input fields: 'Username *', 'Email address *', and 'Password *'. Under the password field, there is a note: 'Make sure it's at least 15 characters OR at least 8 characters including a number and a lowercase letter.' with a link 'Learn more.' Below the input fields is a section for 'Email preferences' with a checked checkbox 'Send me occasional product updates, announcements, and offers.' followed by 'Verify your account'. This section contains a large box with the text 'Please solve this puzzle so we know you are a real person' and a 'Verify' button. At the bottom of the form is a large blue 'Create account' button. Below the button, there is a small disclaimer: 'By creating an account, you agree to the Terms of Service. For more information about GitHub's privacy practices, see the GitHub Privacy Statement. We'll occasionally send you account-related emails.'

and click Create account.

Step 3: Click Verify to verify the account and click Done

Verify your account

Step 4: After verification, click Join a Free Plan

Email preferences

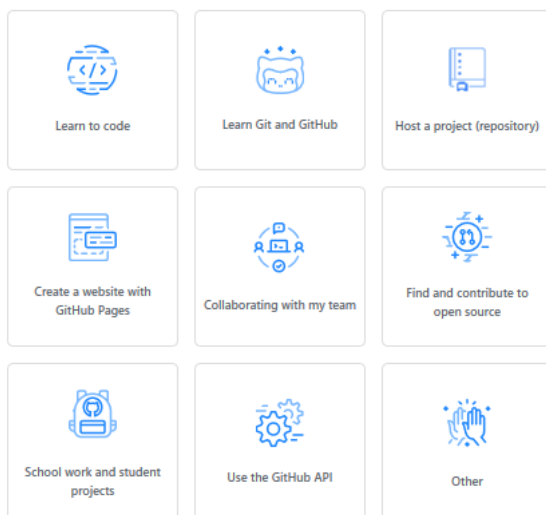

☒ Send me occasional product updates, announcements, and offers.

Step 5: Select the details as shown below and click Complete Setup

What do you plan to use GitHub for?

(Select up to 3)

I am interested in:

languages, frameworks, industries

We'll connect you with communities and projects that fit your interests.

For example: `zeplin` `elm` `apm`

Step 6: Go to your email, find the verification email from GitHub, and click on the link/button in that email to verify your email.

NOTE: If you do not receive verification email, click Resend verification email.

Please verify your email address

Before you can contribute on GitHub, we need you to verify your email address.

An email containing verification instructions was sent to **Your email address**

[Resend verification email](#)[Change your email settings](#)

Email is verified

Your email was verified.

What do you want to do first?

Every developer needs to configure their environment, so let's get your GitHub experience optimized for you.

Start a new project
Start a new repository or bring over an existing repository to keep contributing to it.

Create a repository

Collaborate with your team
Improve the way your team works together and get access to more features with an organization.

Create an organization

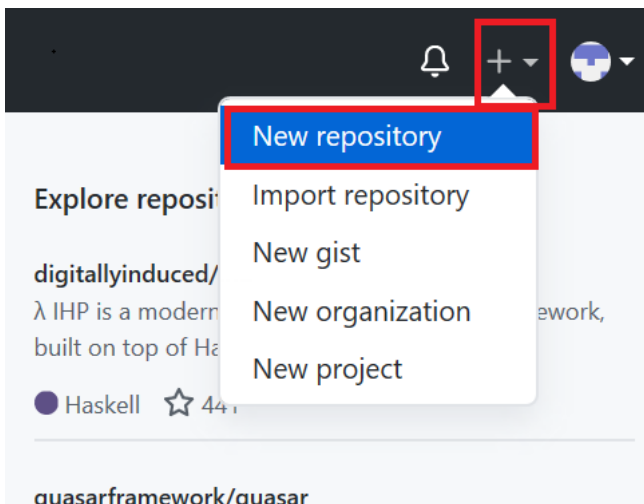

Learn how to use GitHub
Get started with an "Introduction to GitHub" course in our Learning Lab.

Exercise 2: Adding a Project / Repo

Step 1: Click on the + symbol and click New repository.

Step 2: Provide a repository a name and initialize with the empty README.md file.

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere?

[Import a repository.](#)

Owner *

Malika-s ▾

Repository name *

testrepo ✓

Great repository names are short and memorable. Need inspiration? How about **urban-octo-waffle?**

Description (optional)

Public

Anyone on the internet can see this repository. You choose who can commit.

Private

You choose who can see and commit to this repository.

Skip this step if you're importing an existing repository.

☒ **Initialize this repository with a README**

This will let you immediately clone the repository to your computer.

Add .gitignore: None ▾

Add a license: None ▾

Create repository

and click Create repository.

Now, you will be redirected to the repository you have created.

Let's start editing the repository.

Exercise 3: Create / edit a file

Exercise 3a: Edit a file

Step 1: Once the repository is created, the root folder of your repository is listed by default and it has just one file `ReadMe.md`. Click on the pencil icon to edit the file.

Malika-s / testrepo

<> Code Issues Pull requests Actions Projects Wiki Security Insights Settings

Branch: master ▾ Go to file Add file ▾ Code ▾

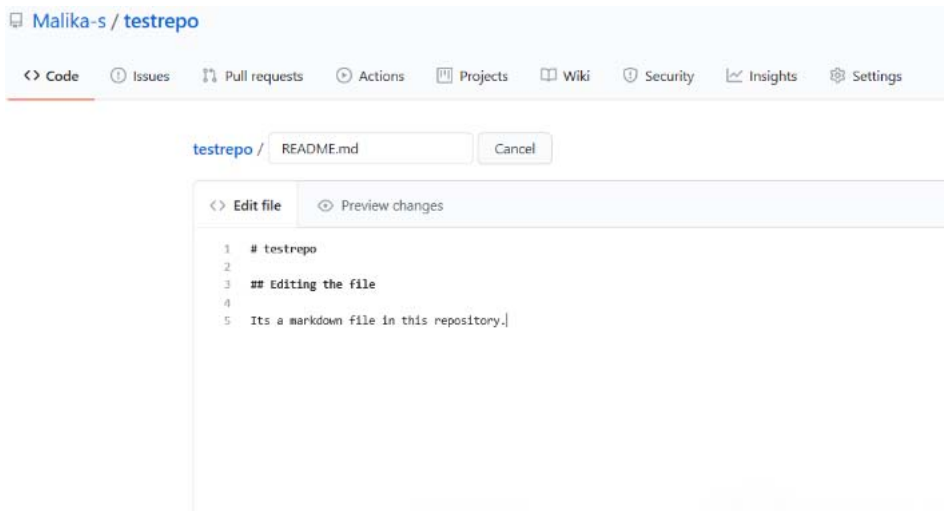

Malika-s committed 783ee17 23 minutes ago 1 commits 1 branch 0 tags

README.md Initial commit 23 minutes ago

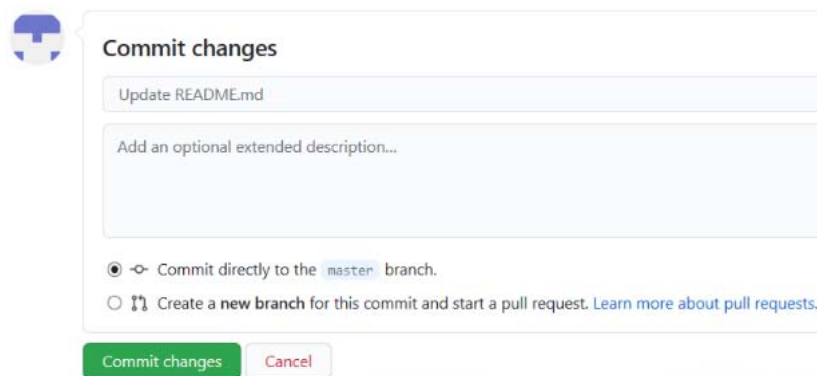

README.md

testrepo

Step 2: Add text to file.

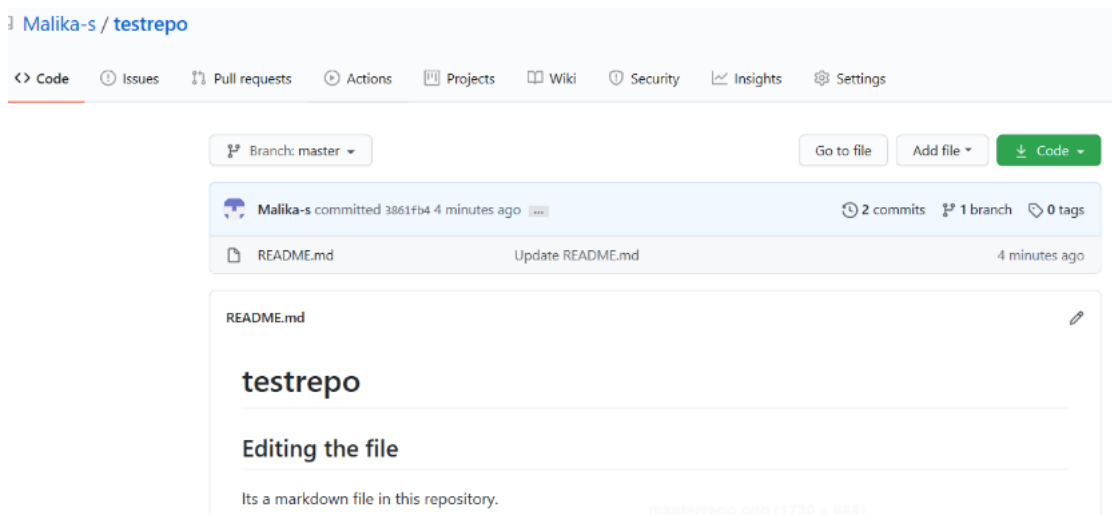

Step 3: Scroll down the page after adding the text and click Commit Changes.

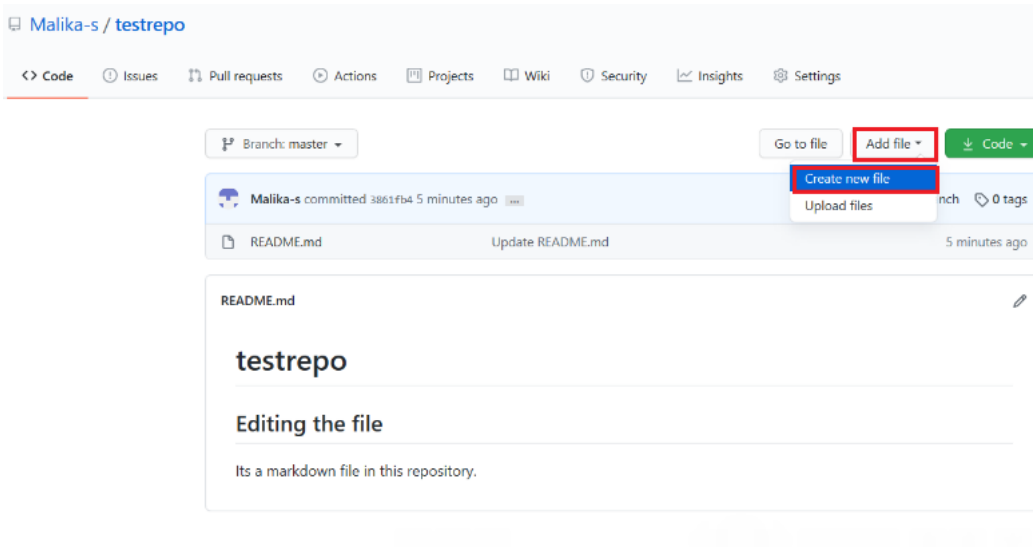

Now, check your file is edited with the new text.

Exercise 3b: Create a new file

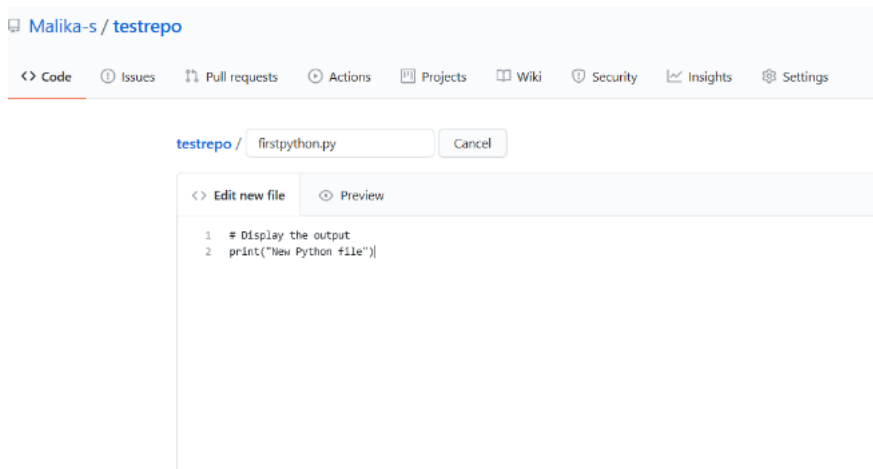

Step 1: Click on the repository name to go back to the master branch like in this testrepo.

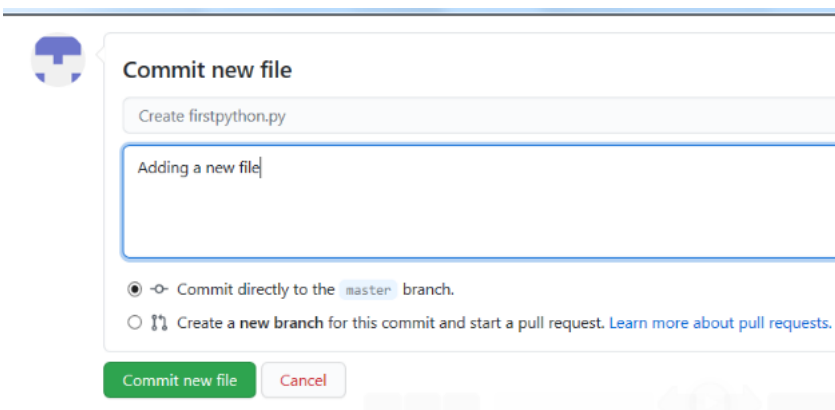

Step 2: Click Add file and select Create New file to create a file in the repository.

Step 3: Provide the file name and the extension of the file. For example, firstpython.py and add the lines.

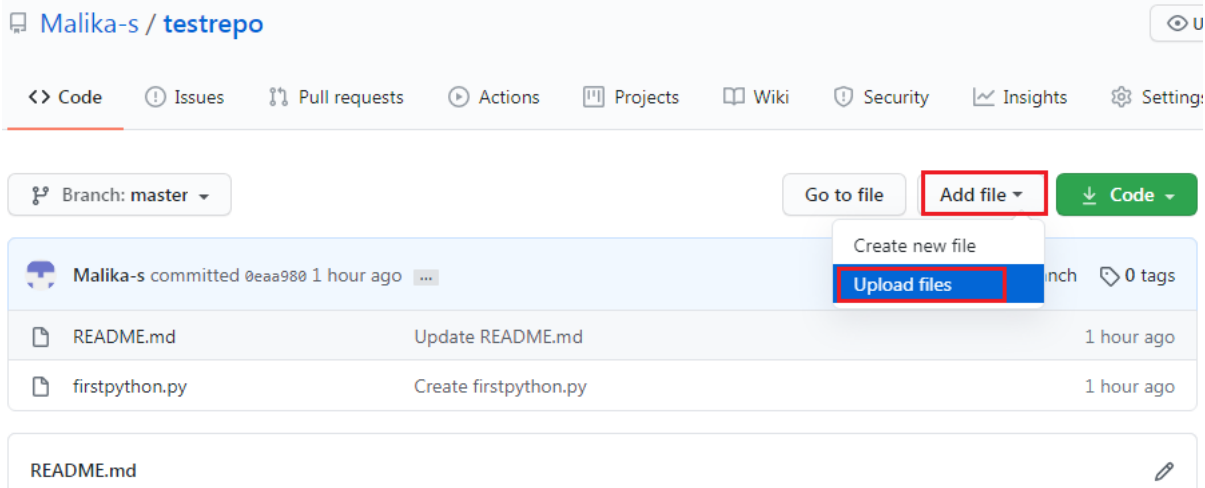

Step 4: Scroll down the page after adding the text. Add description of the file (optional) and click Commit new file.

Step 5: Your file is now added to your repository and the repository listing shows when the file was added/changed.

Exercise 4: Upload a file & Commit

Step 1: Click Add file and select Upload files to upload a file (Upload any .txt, .ipynb, .png file) in the repository from the local computer.

Malika-s / testrepo

Branch: master

Go to file Add file Code

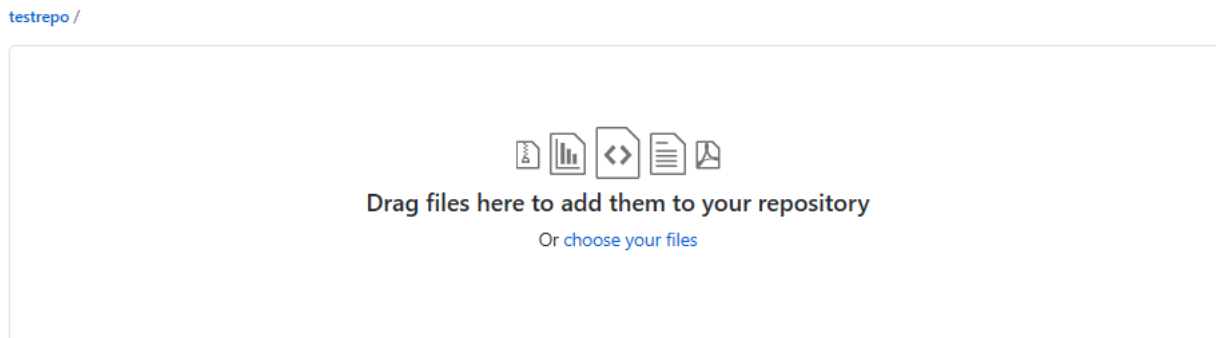

Create new file

Upload files

README.md Update README.md 1 hour ago

firstpython.py Create firstpython.py 1 hour ago

Step 2: Click on choose your files and choose any files from your computer.

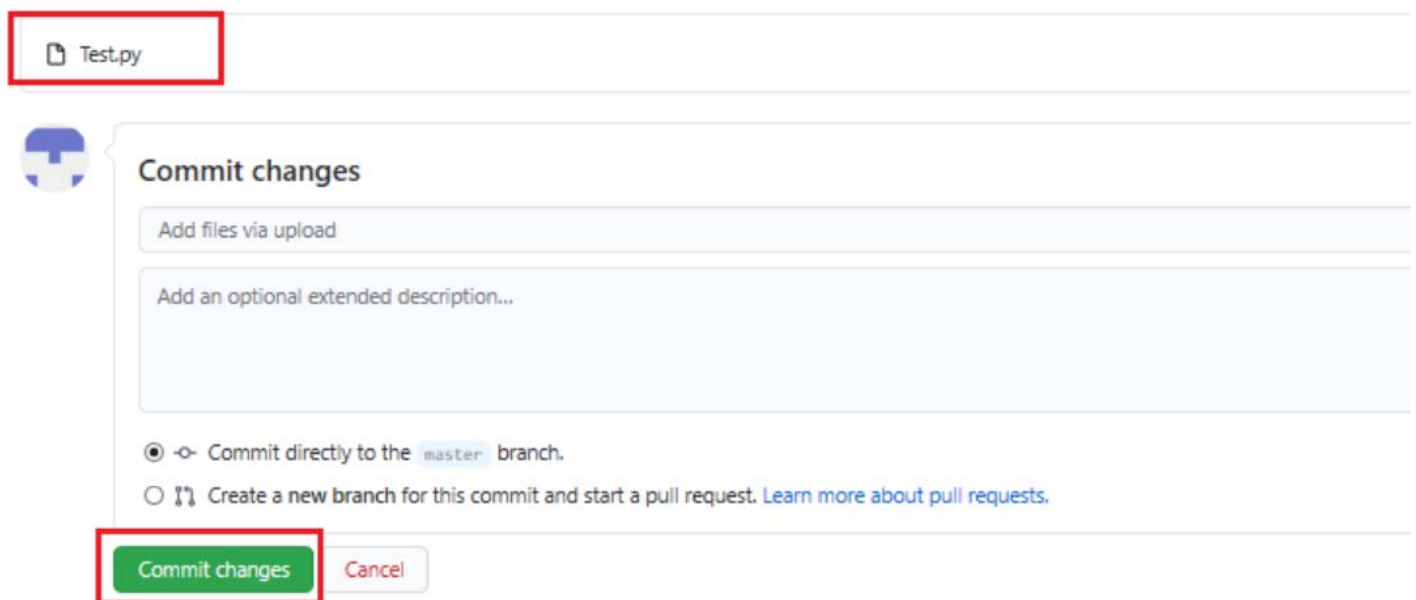

testrepo /

Drag files here to add them to your repository

Or choose your files

Step 3: Once the file finishes uploading, click on Commit Changes

Test.py

Commit changes

Add files via upload

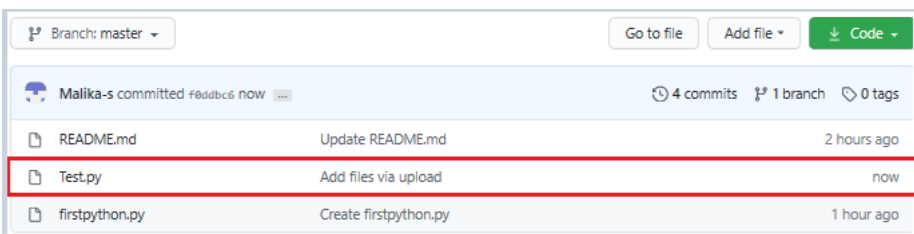

Add an optional extended description...

☒ Commit directly to the master branch.

☐ Create a new branch for this commit and start a pull request. [Learn more about pull requests.](#)

Commit changes Cancel

Step 4: Now, your file is uploaded in the repository.

Branch: master

Go to file Add file Code

Malika-s committed f4db6c6 now

4 commits 1 branch 0 tags

README.md Update README.md 2 hours ago

Test.py Add files via upload now

firstpython.py Create firstpython.py 1 hour ago

Summary

In this document, you have learned how to create a new repository, adding a new file, editing a file, and uploading a file in a repository and commit the changes.
